

ABSTRACT

The invention (Fence Buddy) provides a vertical frame with two horizontal arms with removable stops secured with a lynch pin to hold a roll of barbed wire, cable, or electrical wire without restricting them from unrolling. The base of the frame features a two-inch square tube that fits into a standard two-inch receiver hitch of an automobile, or fits on an ATV (All Terrain Vehicle) that has an adapter receiver. The frame also features an attached vertical tube to house various tools such as posthole diggers, pry bars, tamping poles, ect. The vertical tube has two, heavy-duty supply bags attached on opposite sides to carry smaller supplies such as hammers, nails, pliers, wire wraps, ect. Also attached to the vertical frame are two eye-bolts positioned to connect a fence puller when stretching the barbed wire.
